

Built tough. Built here. World class.

WEARLOK® Wear Bend System

Durable

WEARLOK® plates of hard-faced BISALLOY®, tungsten carbide, and other durable substrates are built to last, even in the most abrasive drilling conditions.

Efficient

Combine WEARLOK® with our FLOTEC® Blow Down, Bearing Swivel, Hose Tails, and Knock-on Nuts for a complete above-the-head package.

Customisable

Main wear components that can be modified to suit your drill rig and drilling conditions.

Higher productivity

WEARLOK® wear bends last longer and reduce wear factors on the main impact area. Easy maintenance facilitates regular inspections, preventing unexpected downtime.

Reduced maintenance times

With only two bolts to undo, teams benefit from a reduced risk of dropping or loss and spend less time working at heights, reducing potential strain. WEARLOK® can be maintained in just 5 minutes – **quicker, safer, easier.**
